How to Get the Best Results from Your New Cotton Wet Mop

To help get the best results from your new cotton mop head, please remember to break it in to remove the natural oils in the fibers before you use it.

Each new mop head should be soaked in a warm water, neutral cleaning solution and wrung out to remove the oils. The soaking and wringing process should be done several times.

The mop head should then be soaked and wrung out in plain water until the oils and cleaning solution are removed from the mop. You are now ready to use your mop head.

To get longer use from your mop heads, always rinse and hang them out to dry after each use, never leave them overnight in a dirty water solution.
